RELIEF PORTRAYAL

Elevation on the map is shown by contour lines at 100-foot intervals.

THRESHOLD CHARACTERISTICS (THIS is a contour interval of 100 feet)

NOTES

THE CONTOUR EVALUATION OVERPRINT

The Contour Evaluation Overprint represents a graphic indication of "vertical accuracy" based on a comparison of the contour and elevation on this chart with the most accurate source material available.

This figure is shown on the contour interval of 100 feet. This figure is shown on the contour interval of 100 feet.

ELEVATIONS which are generally of a higher order of accuracy than contours. The accuracy of spot elevations is indicated in the upper left margin.

KEY TO VERTICAL ACCURACY ANNOTATIONS

This figure may be added to the target as indicated by the contour values shown on the chart to obtain the maximum possible elevation for any contour point.

Based figure indicates the highest possible elevation within the indicated area. No contours are shown in these areas.

CAUTION

AN INFORMATION CURRENT THROUGH JANUARY 1967

Consult H-11 and H-12 for information on the 100-foot contour interval and the 100-foot contour interval.

Consult H-11 and H-12 for information on the 100-foot contour interval and the 100-foot contour interval.

Consult H-11 and H-12 for information on the 100-foot contour interval and the 100-foot contour interval.
